Hassan Ally Qureshi

Canadian Citizen — 3rd year Computer Science Major – 604-376-5975 | hassan.allyqureshi@gmail.com

Projects

nwPlus HackCamp 2026 | *Python, FastAPI, Gemini API, PostgreSQL, TimescaleDB, n8n* November 2026

- Collaborated in a team of 4 to build OpenSesame, a web app that matches students' public GitHub work to beginner-friendly open-source issues
- Developed the FastAPI backend, using Gemini to rate a student's skills 1–5 from their repos and a deterministic weighted scoring function to rank a curated catalog of repositories
- Designed an hourly GitHub ingestion job triggered by n8n across 7 languages, staying under the 30-request/min search limit with async requests capped at 8 concurrent
- Modeled repository history in Tiger Cloud using TimescaleDB hypertables and a continuous aggregate to track stars gained and beginner issues picked up per week

GameFace | *Python, FastAPI, React, TypeScript, AWS, Tailwind CSS* January 2026 – February 2026

- Built a full-stack game recommendation app using Amazon Rekognition to detect user emotions in real-time via webcam or file upload, mapping detected emotions to game genres through a rule-based recommendation engine
- Designed and deployed a serverless FastAPI backend on AWS Lambda, integrating the RAWG REST API for game data retrieval
- Implemented session-based recommendation history in DynamoDB using composite key queries to support per-user history tracking
- Built a responsive frontend with React, TanStack Router, and Tailwind CSS, deployed on Vercel

Vancouver HackCamp 2025 | *Python, FastAPI, PostgreSQL, React, Tailwind CSS* November 2025

- Collaborated in a team of 4 to create FocusLink, a full-stack social productivity app with a Chrome extension combining focus timers, goal tracking, distraction blocking and shared accountability.
- Developed REST APIs using FastAPI and PostgreSQL to support CRUD operations for study sessions, daily goals, and social features
- Implemented secure JWT-based authentication for user login and sessions.
- Partnered with frontend teammates on integrating the API with a React + Tailwind CSS interface, debugging CORS, Authentication, and async issues to ensure smooth communication and successful feature delivery.
- Deployed the FastAPI backend on Render for live use

Asteroid Collision Notifier | *Java, Spring Boot, Kafka, PostgreSQL, Docker* August 2025

- Developed a microservices asteroid collision notifier with Spring Boot integrating NASA's NEO API to detect dangerous asteroids and implementing mail-sending capabilities to notify users
- Implemented event-driven architecture with Apache Kafka for real-time communication between asteroid detection and notification services
- Containerized the application with Docker for simplified deployment and consistent development environments

Technical Skills

Languages: Java, Python, SQL, TypeScript, JavaScript, C++, HTML/CSS, R, C#
Frameworks and Technologies: FastAPI, React, Spring Framework, Spring Boot, Spring Security, Apache Kafka, Tailwind CSS, ASP.NET, Gemini API
Developer Tools: Git, Docker, AWS, PostgreSQL, MySQL, Vercel, Kafka, Render, DynamoDB, pgvector, TimescaleDB, n8n

Education

University of British Columbia Vancouver, BC
Bachelor of Science in Computer Science, GPA: 79.0 *September 2024 – May 2029 (expected)*

Relevant Coursework: Computations, Programs and Programming · Basic Algorithms and Data Structures · Object-Oriented Programming and Design · Introduction to Computer Systems · Introduction to Relational Databases · Intro to Software Engineering · Algorithm Design and Analysis
